Introduction

This report provides preliminary results describing the effects of the changes in mortality coding of Kansas resident deaths due to the implementation of the Tenth Revision of the International Classification of Diseases (ICD-10). The Kansas Department of Health and Environment implemented ICD-10 in 1999, replacing the Ninth Revision of the ICD (ICD-9) that had been in effect since 1979.

The Tenth Revision of the International Classification of Diseases instituted several mortality coding changes. While these changes are necessary to stay current with advances in medical science, they can introduce major disruptions in the mortality statistics time series.

Comparison of two periods within a time series mortality trend requires a determination of whether the difference in the frequencies, crude rates, or age-adjusted rates between the two periods is statistically significant. Applying a comparability ratio, derived by double-coding a year of deaths, to counts and rates for 1998 eliminates the effects of the ICD-10 revision changes. If the 95% confidence intervals of 1999 and 1998 age-adjusted mortality rates did not overlap, the reported increase or decrease was statistically significant. Thus, the difference was not due to ICD-10 classification and coding changes but an actual change in a mortality trend.

Implementation of ICD-10 changed the classification, processing, and presentation of mortality data. Some titles changed and some diseases have moved from one section to another. ICD-10 is more detailed, incorporating about 8,000 causes of death compared to about 5,000 causes in ICD-9. ICD-10 codes are alpha-numeric while ICD-9 codes are numeric. In the case of the overlapping use of some ICD-9 values an 'E' was placed before the number to distinguish between natural or injury and external cause codes. Some of the classification chapters have been reorganized. The rules for processing mortality data have changed slightly but account for only a portion of the changes seen in mortality statistics

Concurrent with ICD-10 revisions new tabulation lists were developed. The List of 113 Selected Causes of Death (113-cause list) was developed for the general analysis of ICD-10 mortality statistics and for ranking leading causes of death in the United States. It expands and replaces the List of 72 Selected Causes. While the name implies 113 causes of death, it in effect contains 135 categories when groups of causes are included. The standard formats used in the United States to report mortality are the 39 Selected Causes of Mortality and the 113 Selected Causes of Mortality. When the summary groupings of the 113 Selected Cause list are included the total number of displayed categories is 135.

Methods and Materials

Kansas mortality data is used by program managers and policy makers to identify public health concerns and assess progress in meeting health goals. Frequently, these assessments track a mortality trend over several years. This Kansas study was begun

to identify the impact of the ICD-10 conversion and serve as baseline data for establishing mortality trends from the 1990s into the new decade.

In an effort to measure the discontinuity in the cause-of-death statistics resulting from ICD-10, the National Center for Health Statistics undertook a comparability study. This study, also known as a bridge-coding study, was designed to measure the effects of ICD-10 with the previous revision of mortality statistics by cause of death. NCHS researchers recoded deaths from 1996 using ICD-10. Since the 1996 cause-of-death coding was originally produced using ICD-9, this enabled researchers to create a comparability ratio from the dual classification. This ratio was created by dividing the number of deaths for an ICD-10 cause or category by the number of deaths coded for that category under ICD-9. The comparability ratios (Table 1) represent the impact of ICD-10 on mortality coding and can be used to adjust pre-1999 count data, crude mortality rates, and age-adjusted mortality rates.

The ratios represent the net effect of the new revision on cause-of-death statistics. Within limits the ratios can be used to adjust mortality statistics coded under ICD-9. The comparability ratios used herein are preliminary values from NCHS. About 20 percent of the 2,314,690 deaths in 1996, initially rejected by automated coding systems, were being manually coded under ICD-10. In such instances where records have not been recoded or ratios were considered unreliable, NCHS did not publish comparability ratios. Final comparability ratios may differ slightly when the remaining 1996 deaths are recoded.

A comparability ratio of 1.00 means the same number of deaths was assigned to the category under both ICD-9 and ICD-10, thus showing no net effect from the new revision on that particular cause. A comparability ratio of less than 1.00 results in fewer deaths being classified to a category under ICD-10 than under the prior revision. Comparability ratios greater than 1.00 mean a larger number of deaths will be reclassified to a category under ICD-10.

The data in this report are from the 1990 –1999 Kansas annual mortality history files. Only resident deaths were analyzed. Due to confidentiality requirements AIDS deaths in the annual history files are recoded to cause unknown, and thus were not available for the full nine-year data analysis. AIDS deaths for 1998 and 1999 were compared.

As part of its comparison, NCHS produced a crosswalk (appendix 1) to enable regrouping of pre-1999 deaths into broad ICD-10 cause groups. The List of 113 Selected Causes of Death includes 22 groups of causes for a total of 135 categories.

In order to assess mortality trends during the 1998-1999 bridgeover period, the first step involved regrouping pre-1999 Kansas resident deaths into the 135 categories of the List of 113 Selected Causes of Death. SAS software programming recoded the underlying cause for 1990 to 1998 deaths to the 135 categories. US Census Bureau estimates for 1990-1999 were imported for use as the population denominator data. Additional

programming coded the deaths into 11 age-groups for calculation of age-specific rates and age-adjusted rates.

Programming summarized category-specific frequencies and generated age-specific rates, crude mortality rates, age-adjusted rates, standard error values, relative standard error values, and 95% confidence interval values for each category. Comparability ratio-modified counts, crude mortality rates, and age-adjusted rates were created by multiplying the original values by the NCHS comparability ratio. The programming created 95% confidence intervals for those categories where the number of events was 100 or greater. Application of the upper and lower limits of the Poisson distribution enabled creation of confidence intervals for categories with less than 100 events.

The modified counts and rates for 1998 were compared to the 1999 counts and rates. If the 95% confidence intervals for the rates did not overlap the change was considered statistically significant.

ICD-9 and ICD-10 age-adjusted rates were plotted to compare trends between the two coding methods (Figures 1-10). As the charts are not intended to compare rates among different causes or categories of death the y-axis does not start at zero. Each of the ten leading causes of death are plotted and compared in Figure 11.

Findings and Discussion

NCHS' recoding of 1996 deaths and grouping into the ICD-10 groups resulted in preliminary comparability ratios that decreased the counts and mortality rates for pre-1999 deaths assigned to 62 categories (Table 1). Fifty-one categories had higher counts and rates as the result of applying the ratios. In one category there was no change. Comparability ratios could not be established for 21 categories because manual coding of deaths in the categories was incomplete or due to the relatively small number of events in that category.

Among the 135 categories mortality rates (crude and age-adjusted) were lower for 46 causes in 1999 compared to comparability-modified values for 1998 (Table 4). Mortality rates for 34 causes were higher in 1999 than in 1998. In seven instances rates were unchanged. Small frequencies or the absence of a comparability ratio made rate comparisons impossible for 48 causes.

The makeup of the top ten leading causes of death in Kansas changed as a result of the ICD-10 revision. The top six leading causes remain unchanged in ranking (Table 2). Alzheimer's disease became the 9th leading cause of death in 1998 after the comparability ratio was applied to ICD-9 mortality totals. In 1999 Alzheimer's was the 8th leading cause moving kidney diseases to 9th. Atherosclerosis ranked 11th in the 1998 comparability ratio modified mortality data, with suicide ranked 10th. Rankings for the two causes of death reversed in 1999.

Table 4 compares the 1999 counts, crude mortality rates, and age-adjusted rates for the 135 categories to the unmodified values and comparability-modified values for 1998.

Table 5 provides the 1999 age-adjusted and the 1990-1998 comparability-modified age-adjusted mortality rates for the 135 categories. Table 6 provides actual counts for the 135 categories with 1990-1998 deaths grouped into ICD-10 categories. Table 7 shows the counts for 1990-1998 modified by the comparability ratios.

Three Increases Statistically Significant

Of the 113 Selected Causes of Death only three showed a statistically significant change from 1998 to 1999 in spite of the application of the comparability ratio. The three causes were Alzheimer's Disease, Atherosclerosis and pneumonitis due to solids and liquids. In each group the number of deaths and rates increased significantly despite application of the comparability ratio.

Preliminary results from the National Center for Health Statistics dual coding of 1996 deaths produced a preliminary comparability ratio of 1.5536 (Table 1). Under ICD-9 only 247 Alzheimer's deaths were recorded in Kansas in 1998. Applying the comparability ratio modified the 1998 count to 384 (Table 2). This compares to the 1999 Alzheimer's death total of 509. Alzheimer's Disease became the 8th leading cause of death in Kansas in 1999.

Many deaths formerly considered senile dementia are now Alzheimer's Disease. The 1998 comparability modified crude mortality rate for Alzheimer's Disease was 14.6 deaths per 100,000 population. The 1999 crude mortality rate (19.2) was 31.5 percent higher. The 1998 comparability-modified age-adjusted mortality rate was 12.7 (95%CI ± RSE 8.0) (Table 3). The 1999 age-adjusted rate of 16.5 (95%CI ± RSE 4.6) represented a statistically significant 29.9 percent increase.

The NCHS comparability ratio of 1.5536 means about 55 percent more Alzheimer's deaths were expected 1999 compared to 1998 due in part to the implementation of ICD-10. However, due to the better understanding of the disease, the number of Alzheimer's and Presenile dementia deaths continued rising in 1997 and 1998. That rapid change is not addressed in the comparability ratio based on 1996 data.

NCHS applied the ratio of 1.5536 when comparing 1998 Alzheimer's deaths to 1999 data in *Deaths: Final Data for 1999*. It noted that had comparability ratios been based on double-coding 1997-1999 Alzheimer's and Presenile dementia deaths the ratio would have been higher. Based on a higher ratio the 1998-1999 increase would not be statistically significant.

Atherosclerosis, the 9th leading cause of death in 1998, fell to the 10th leading cause of death in 1999 (Table 2). Atherosclerosis deaths showed a statistically significant increase despite the application of the NCHS comparability ratio of 0.9637 (Table 1). Applying the ratio to the 1998 deaths modified the actual number Atherosclerosis deaths from 272 to 262. This compared to 345 deaths in 1999 (Table 2). The 1998

comparability modified crude mortality rate for Atherosclerosis was 10.0 deaths per 100,000 population. The 1999 crude mortality rate was 13.0, a 30.0 percent increase (Table 4). The 1998 comparability-modified age-adjusted mortality rate was 8.5 (95%CI \pm 1.0 RSE 6.0) (Table 3). The 1999 age-adjusted rate of 11.1 (95%CI \pm 1.2 RSE 5.4) was a statistically significant 30.6 percent increase.

Nationally the 1999 age-adjusted mortality rate for Atherosclerosis was 5.5 per 100,000 population. The figure represented a 1.8 percent drop from the 1998 comparability-modified age-adjusted rate of 5.6.

Pneumonitis due to Solids and Liquids accounted for 103 deaths in 1998 (Table 4). Applying the comparability ratio of 1.1185 produced a modified count of 115. The 1998 comparability-modified crude mortality rate for Pneumonitis was 4.4 per 100,000 population. The 1999 crude mortality rate was 6.4. The comparability-modified age-adjusted mortality rate for 1998 was 3.9 (95%CI \pm 0.8 RSE 10.5). The 1999 age-adjusted mortality rate was 5.6 (95%CI \pm 0.9 RSE 7.7), a statistically significant 43.6 percent increase over the previous year.

The 1999 Kansas age-adjusted mortality rate equaled the 1999 U.S. rate. The U.S. rate however increased only 3.7% from the comparability modified 1998 age-adjusted mortality rate of 5.4 per 100,000. Kansas' comparability modified age-adjusted mortality rate for Pneumonitis due to Solids and Liquids has increased 55.6% since 1990 (Table 5).

Discussion of the extent of change and the statistical significance of the three causes remains incomplete. The figures are based on preliminary, national comparability ratios. The use of state-based comparability ratios, something NCHS plans to issue for all 50 states, would likely alter the findings.

Changes to Kansas Leading Causes of Mortality

Heart Disease

The leading cause of death in Kansas, heart disease claimed 6,956 Kansans in 1999. Re-grouping 1998 deaths into the ICD 10 categories produced an actual count of 7,164 heart disease deaths. Applying the comparability ratio of 0.9858, produced a modified count of 7,062 (Tables 1, 2). The comparability-modified crude mortality rate was 268.6 deaths per 100,000 population. The 1999 crude mortality rate was 262.1. The 1998 comparability-modified age-adjusted mortality rate was 244.3 (95%CI \pm 5.7 RSE 1.1) compared to the 1999 age-adjusted rate of 236.8 (95%CI \pm 5.6 RSE 1.2) (Tables 3, 4). The decrease was not statistically significant.

Cancer

Cancer, reported as malignant neoplasms, accounted for 5,315 deaths in 1999. In 1998 the re-grouping of deaths in ICD10 categories resulted in an actual count of 5,109. The comparability ratio for cancer is 1.0068. Applying the ratio to the 1998 count produced

a comparability-modified count of 5,144 deaths (Tables 1, 2). The 1999 crude mortality rate for the second leading cause of death in Kansas was 200.3 deaths per 100,000 population compared to a 1998 comparability modified crude mortality rate of 195.6. The 1999 age-adjusted mortality rate of 192.3 (95%CI ± 5.2 RSE 1.4) was not a statistically significant increase over the 1998 comparability modified age-adjusted mortality rate of 187.8 (95%CI ± 5.2 RSE 1.4) (Tables 3, 4).

Cerebrovascular Disease

In 1999 cerebrovascular disease accounted for 1,837 deaths. The re-grouping of the prior year's deaths into ICD-10 categories identified 1,814 deaths. Applying the cerebrovascular disease comparability ratio, 1.0588 (Tables 1, 2), generated a comparability-modified tally of 1,921. The 1999 crude mortality rate of 69.2 deaths per 100,000 population was lower than the 1998 comparability-modified crude rate of 73.1. The 1999 age-adjusted mortality rate of 61.6 (95%CI ± 2.9 RSE 2.3) did not represent a statistically significant decrease from the 1998 comparability-modified age-adjusted mortality rate of 65.2 (95%CI ± 3.1 RSE 2.4) (Tables 3, 4).

Chronic Lower Respiratory Disease

The fourth leading cause of death in Kansas Chronic lower respiratory disease (CLRD) was known as Chronic obstructive pulmonary disease (COPD) in the ICD-9 List of 72 Selected Causes of Death. In 1999, 1,387 Kansas residents died from CLRD. The re-grouping of 1998 deaths into ICD-10 categories identified 1,194 deaths. A comparability ratio of 1.0478 produced a comparability-modified count of 1,251 deaths (Tables 1 2). The 1999 crude mortality rate for CLRD was 52.3 deaths per 100,000 population. This compared to a 1998 comparability modified crude rate of 47.6. The 1999 age-adjusted mortality rate was 48.9 (95%CI ± 2.6 RSE 2.7). The 1998 comparability-modified age-adjusted rate was 44.5 (95%CI ± 2.6 RSE 3.0) (Tables 3, 4). The increase was not statistically significant.

Unintentional Injuries

The number of 1999 unintentional injury deaths, 1,093 (Table 2), is 31 less than the total reported in the *Annual Summary of Vital Statistics, Kansas, 1999*. The annual summary, to remain consistent with prior years' reports, retained the ICD-9 grouping of unintentional injuries and adverse effects from medical and surgical care. The List of 113 Selected Causes of Death separates adverse effects from unintentional injuries. Adverse effects are now list number 135 Complications of medical and surgical care.

The 1999 total of unintentional injury deaths, 1,093, compares to an actual count of 1,092 deaths in 1998 when re-grouped into ICD-10 categories. The total when modified by the comparability ratio of 1.0305 was 1,125 (Tables 1, 2). The 1999 crude mortality rate was 41.2 deaths per 100,000 population. The 1998 comparability-modified crude mortality rate was 42.8. The 1999 age-adjusted mortality rate of 39.7 (95%CI ± 2.4 RSE 3.0) was not a statistically significant decrease from the 1998 comparability-modified age-adjusted mortality rate of 41.3 (95%CI ± 2.5 RSE 3.1) (Tables 3,4).

Pneumonia & Influenza

Pneumonia and influenza (P&I) was the sixth leading cause of death in Kansas in 1999, responsible for 670 deaths. This figure compares to an actual count of 984 deaths in 1998, when that year's deaths are summarized into the ICD-10 groupings. The total when modified by the comparability ratio of 0.6982 was 687 (Tables 1, 2). The 1999 crude mortality rate for P&I was 25.2 per 100,000 population. This compared to the 1998 comparability-modified crude rate of 26.1. The 1999 age-adjusted mortality rate of 22.0 (95%CI ± 1.7 RSE 3.9) did not represent a statistically significant decrease from the 1998 comparability-modified age-adjusted rate of 22.9 (95%CI ± 1.2 RSE 2.7) (Tables 3, 4).

In the case of Pneumonia and Influenza with a comparability ratio of 0.6982, implementation of ICD-10 will decrease the number and rate for P & I deaths by about 30 percent.

Diabetes

Diabetes, the seventh leading cause of death in Kansas in 1999, claimed a total of 645 individuals. When 1998 deaths are reallocated to the ICD-10 groupings, an actual count of 643 deaths is produced. Applying the comparability ratio of 1.0082, generates a comparability-modified count of 648 (Tables 1, 2). The 1999 diabetes crude mortality rate was 24.3 deaths per 100,000 population. The 1998 comparability-modified crude rate was 24.7. The 1999 age-adjusted mortality rate of 22.8 (95%CI ± 1.8 RSE 4.0) is not a statistically significant decrease from the 1998 comparability-modified age-adjusted rate of 23.2 (95%CI ± 1.8 RSE 4.0) (Tables 3, 4).

Kidney Diseases

Kidney diseases (nephritis, nephrotic syndrome and nephrosis) was the ninth leading cause of death in Kansas in 1999. A total of 386 persons died from kidney diseases that year. Reallocating 1998 deaths to the ICD-10 groupings produced an actual count of 348. Modifying that count by the comparability ratio of 1.2320 increased it to 429(Tables 1, 2). The 1999 kidney disease crude mortality rate was 14.5 deaths per 100,000 population. The 1998 comparability-modified crude rate was 16.3. The 1999 age-adjusted mortality rate was 13.0 (95%CI ± 1.3 RSE 5.1). The 1998 comparability-modified age-adjusted rate was 14.7 (95%CI ± 1.8 RSE 6.0) (Tables 3, 4). The decrease was not statistically significant.

AIDS

The number and age-adjusted rate of AIDS deaths to Kansas residents were higher in 1999 compared to 1998. The actual number of AIDS deaths in 1998 was 27. Applying the comparability ratio of 1.1448 produced a modified 1998 figure of 31 (Tables 1, 2). This compared to 40 AIDS deaths in 1999. The 1998 comparability-modified age-adjusted mortality rate for AIDS was 1.2 per 100,000 population (95%CI 0.1-1.7 RSE 18.0). This compared to a 1999 age-adjusted mortality rate of 1.6 (95%CI 1.1-2.1 RSE 15.8) (Tables 3, 4). The increase was not statistically significant.

Conclusions

Implementation of ICD-10 has provided public health researchers with greater detail on mortality. Use of the preliminary comparability ratios for 1990-1998 Kansas mortality data has preserved time-series trends in age-adjusted mortality rates. For the 10 leading causes of death in Kansas (Figures 1-10), trends are largely unchanged from ICD-9 age-adjusted rates.

ICD-10 impacted the rankings at the bottom of the ten leading causes of death in Kansas (Table 2). The order of the top seven leading causes remains unchanged.

Comparability ratios represent an important tool for comparison of the 10 leading causes of Kansas' mortality during the bridgeover period. While useful in evaluating the entire 1998 mortality cohort, comparability ratios may not be as helpful when comparing mortality among sub-populations such as race, county, and age-group. Many of the ratios range between 0.95 and 1.05. Some causes of death experience that level of random fluctuation from year to year. The random variation may be greater in sub-populations.

NCHS noted in *Deaths: Final Data for 1999* some selected causes have problems of interpretation. Researchers evaluating mortality trends for these causes should review NCHS findings. Because of changes in the components of the causes of deaths prior to 1996, comparability ratios become less applicable for comparisons.

Since manual ICD-10 coding of a portion of 1996 deaths remains to be completed, the comparability ratios are subject to change. Modified counts and rates may also change when NCHS provides states with state-specific comparability ratios. These final ratios will impact the comparison of 1999 mortality data to 1998.

Further evaluation of Kansas' mortality trends using final and state-specific comparability ratios should give greater insight into the causes of death not covered in this study.

Technical Notes

Confidence Intervals and Significance Tests

Since more than 99 percent of all births and deaths are registered, the number of vital events reported for Kansas is essentially a complete count. Although these numbers are not subject to sampling errors, they may be affected by non-sampling errors such as mistakes in recording the mother's residence or age during the registration process.

The potential impact of variation increases as the number of events decreases. This makes resulting rates subject to volatility, and requires caution when comparing to rates from other populations, geographic areas, and time periods.

The 95 percent confidence interval is the range of values for the number of events, rates or percent of events that you could expect in 95 out of 100 cases (95 out of 100 rule). The confidence limits are the end points of this range of values (the highest and lowest values). Confidence limits for numbers, rates and percents can be estimated from the actual number of events. Procedures differ for rates and percent calculations and also differ depending on the number of events on which the statistics are based.

Confidence limits are important in determining whether one rate is "significantly" different from another. The term "significantly" refers to whether or not the difference between two rates indicates a small probability (< 5%) the difference might have occurred by chance.

Confidence limits specify the degree of certainty that can be placed on a given number or rate. Similarly statistical significance tests try to specify how often a difference between two rates could be expected.

If the difference between two rates would occur due to variability less than 5 times out of 100, the difference is statistically significant at the 95% level. In essence, there is a 95 percent level of confidence that the difference is not due to the chance variability in the rates or the number of events on which the rates are based.

On the other hand, if the difference would occur more than 5 times out of 100, then the difference is not statistically significant. If the level of certainty is only 50 percent, or even 94 percent, the difference could not occur by chance, then the difference is not statistically significant. There must be a 95 percent level of confidence when the 95 percent significance test is used.

Computing confidence limits, and ultimately statistical significance, for pairs of rates varies depending on the number of events on which each rate was created. The procedures are listed below.

Confidence limits for rates based on less than 100 events

When the numerator's number of events is less than 100, the confidence interval for a rate can be estimated using the two formulas which follow and the values in Appendix 2 .

$$\text{Lower limit} = R \times L$$

$$\text{Upper limit} = R \times U$$

where:

- | | | |
|-----|---|---|
| R | = | the rate (birth rate, mortality rate, etc.) |
| L | = | the value in Appendix 2 that corresponds to the number N in the numerator of the rate |
| U | = | the value in Appendix 2 that corresponds to the number N in the numerator of the rate |

Confidence limits for rates when the numerator is 100 or more

In this case, use the following formula for the rate R based on the number of events N:

$$\begin{aligned} \text{Lower limit} &= R - [1.96 \times (R / N)] \\ \text{Upper limit} &= R + [1.96 \times (R / N)] \end{aligned}$$

where:

- | | | |
|-----|---|---|
| R | = | the rate (birth rate, mortality rate, etc.) |
| N | = | the number of events (births, deaths, etc.) |

Significance test when at least one of the rates is based on fewer than 100 events

To compare two rates, when one or both of those rates are based on less than 100 events, first compute the confidence intervals for both rates. Then check to see if those intervals overlap. If they do overlap, the difference is not statistically significant at the 95-percent level. If they do not overlap, the difference is indeed "statistically significant."

Significance test when both rates are based on 100 or more events

To compare two rates when both are based on 100 or more events, first calculate the difference between the two rates by subtracting the lower rate from the higher rate. This difference is considered statistically significant if it exceeds the statistic in the formula below. This statistic equals 1.96 times the standard error for the difference between two rates.

$$1.96 \sqrt{\frac{R_1^2}{N_1^2} + \frac{R_2^2}{N_2^2}}$$

where:

- | | | |
|-------|---|-----------------------------|
| R_1 | = | the first rate |
| R_2 | = | the second rate |
| N_1 | = | the first number of events |
| N_2 | = | the second number of events |

- If the difference is greater than this statistic, then the difference would occur by chance less than 5 times out of 100. The difference is statistically significant at the 95 percent confidence level.
- If the difference is less than this statistic, the difference might occur by chance more than 5 times out of 100. The difference is not statistically significant at the 95 percent confidence level.

Appendix 1

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
	All causes.....	
1#	Salmonella infections.....	A01-A02 (002-003)
2#	Shigellosis and amebiasis.....	A03,A06 (004,006)
3	Certain other intestinal infections.....	A04,A07-A09 (007-009)
#	Tuberculosis.....	A16-A19 (010-018)
4	Respiratory tuberculosis.....	A16 (010-012)
5	Other tuberculosis.....	A17-A19 (013-018)
6#	Whooping cough.....	A37 (033)
7#	Scarlet fever and erysipelas.....	A38,A46 (034.1-035)
8#	Meningococcal infection.....	A39 (036)
9#	Septicemia.....	A40-A41 (038)
10#	Syphilis.....	A50-A53 (090-097)
11#	Acute poliomyelitis.....	A80 (045)
12#	Arthropod-borne viral encephalitis.....	A83-A84,A85.2 (062-064)
13#	Measles.....	B05 (055)
14#	Viral hepatitis.....	B15-B19 (070)
15#	Human immunodeficiency virus (HIV) disease.....	B20-B24 (042-044)
16#	Malaria.....	B50-B54 (084)
17	Other and unspecified infectious and parasitic diseases and their sequelae.....	A00,A05,A20-A36,A42-A44,A48-A49,A54-A79, A81-A82,A85.0-A85.1,A85.8,A86-B04,B06-B09,B25-B49,B55-B99 (001,005,020-032,037,039-041,046-054,056-061,065-066,071-083,085-088,098-134,136-139,771.3)

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
#	Malignant neoplasms.....	.C00-C97 (140-208)
18	Malignant neoplasms of lip, oral cavity and pharynx.....	.C00-C14 (140-149)
19	Malignant neoplasm of esophagus.....	.C15 (150)
20	Malignant neoplasm of stomach.....	.C16 (151)
21	Malignant neoplasms of colon, rectum and anus.....	.C18-C21 (153-154)
22	Malignant neoplasms of liver and intrahepatic bile ducts.....	.C22 (155)
23	Malignant neoplasm of pancreas.....	.C25 (157)
24	Malignant neoplasm of larynx.....	.C32 (161)
25	Malignant neoplasms of trachea, bronchus and lung.....	.C33-C34 (162)
26	Malignant melanoma of skin.....	.C43 (172)
27	Malignant neoplasm of breast.....	.C50 (174-175)
28	Malignant neoplasm of cervix uteri.....	.C53 (180)
29	Malignant neoplasms of corpus uteri and uterus, part unspecified.....	.C54-C55 (179,182)
30	Malignant neoplasm of ovary.....	.C56 (183.0)
31	Malignant neoplasm of prostate.....	.C61 (185)
32	Malignant neoplasms of kidney and renal pelvis.....	.C64-C65 (189.0-189.1)
33	Malignant neoplasm of bladder.....	.C67 (188)
34	Malignant neoplasms of meninges, brain and other parts of central nervous system.....	.C70-C72 (191-192)
	Malignant neoplasms of lymphoid, hematopoietic and related tissue.....	.C81-C96 (200-208)
35	Hodgkin's disease.....	.C81 (201)
36	Non-Hodgkin's lymphoma.....	.C82-C85 (200,202)
37	Leukemia.....	.C91-C95 (204-208)
38	Multiple myeloma and immunoproliferative neoplasms.....	.C88,C90 (203)
39	Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue..	.C96 ???
40	All other and unspecified malignant neoplasms.....	.C17,C23-C24,C26-C31, C37-C41,C44-C49,C51-C52,C57-C60,C62-C63,C66,C68-C69,C73-C80,C97

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
(152,156,158-160,163-171,173,181,183.2-184,186-187,189.2-190,193-199)		
41#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior.....D00-D48 (210-239)	
42#	Anemias.....D50-D64 (280-285)	
43#	Diabetes mellitus.....E10-E14 (250)	
#	Nutritional deficiencies.....E40-E64 (260-269)	
44	Malnutrition.....E40-E46 (260-263)	
45	Other nutritional deficiencies.....E50-E64 (264-269)	
46#	Meningitis.....G00,G03 (320-322)	
47#	Parkinson's disease.....G20-G21 (332)	
48#	Alzheimer's disease.....G30 (331.0)	
	Major cardiovascular diseases.....I00-I78 (390-434,436-448)	
#	Diseases of heart.....I00-I09,I11,I13,I20-I51 (390-398,402,404,410-429)	
49	Acute rheumatic fever and chronic rheumatic heart diseases.....I00-I09 (390-398)	
50	Hypertensive heart disease.....I11 (402)	
51	Hypertensive heart and renal disease.....I13 (404)	
	Ischemic heart diseases.....I20-I25 (410-414,429.2)	
52	Acute myocardial infarction.....I21-I22 (410)	
53	Other acute ischemic heart diseases.....I24 (411)	
	Other forms of chronic ischemic heart disease.....I20,I25 (412-414,429.2)	
54	Atherosclerotic cardiovascular disease, so described.....I25.0 (429.2)	
55	All other forms of chronic ischemic heart disease.....I20,I25.1-I25.9 (412-414)	
	Other heart diseases.....I26-I51 (415-429.1,429.3-429.9)	
56	Acute and subacute endocarditis.....I33 (421)	
57	Diseases of pericardium and acute myocarditis.....I30-I31,I40 (420,422-423)	
58	Heart failure.....I50 (428)	

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
59	All other forms of heart disease.....	I26-I28, I34-I38, I42-I49, I51 (415-417, 424-427, 429.0-429.1, 429.3-429.9)
60#	Essential (primary) hypertension and hypertensive renal disease.....	I10, I12 (401, 403)
61#	Cerebrovascular diseases.....	I60-I69 (430-434, 436-438)
62#	Atherosclerosis.....	I70 (440)
	Other diseases of circulatory system.....	I71-I78 (441-448)
63#	Aortic aneurysm and dissection.....	I71 (441)
64	Other diseases of arteries, arterioles and capillaries.....	I72-I78 (442-448)
65	Other disorders of circulatory system.....	I80-I99 (451-459)
#	Influenza and pneumonia.....	J10-J18 (480-487)
66	Influenza.....	J10-J11 (487)
67	Pneumonia.....	J12-J18 (480-486)
	Other acute lower respiratory infections.....	J20-J22 (466)
68#	Acute bronchitis and bronchiolitis.....	J20-J21 (466)
69	Unspecified acute lower respiratory infection.....	J22 (?)
#	Chronic lower respiratory diseases.....	J40-J47 (490-494, 496)
70	Bronchitis, chronic and unspecified.....	J40-J42 (490-491)
71	Emphysema.....	J43 (492)
72	Asthma.....	J45-J46 (493)
73	Other chronic lower respiratory diseases.....	J44, J47 (494, 496)
74#	Pneumoconioses and chemical effects.....	J60-J66, J68 (500-506)
75#	Pneumonitis due to solids and liquids.....	J69 (507)
76	Other diseases of respiratory system.....	J00-J06, J30-J39, J67, J70-J98 (034.0, 460-465, 470-478, 495, 508-519)
77#	Peptic ulcer.....	K25-K28 (531-534)
78#	Diseases of appendix.....	K35-K38 (540-543)
79#	Hernia.....	K40-K46 (550-553)

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
#	Chronic liver disease and cirrhosis.....	K70, K73-K74 (571)
80	Alcoholic liver disease.....	K70 (571.0-571.3)
81	Other chronic liver disease and cirrhosis.....	K73-K74 (571.4-571.9)
82#	Cholelithiasis and other disorders of gallbladder.....	K80-K82 (574-575)
#	Nephritis, nephrotic syndrome and nephrosis.....	N00-N07, N17-N19, N25-N27 (580-589)
83	Acute and rapidly progressive nephritic and nephrotic syndrome.....	N00-N01, N04 (580-581)
84	Chronic glomerulonephritis, nephritis and nephritides not specified as acute or chronic, and renal sclerosis unspecified.....	N02-N03, N05-N07, N26 (582-583, 587)
85	Renal failure.....	N17-N19 (584-586)
86	Other disorders of kidney.....	N25, N27 (588-589)
87#	Infections of kidney.....	N10-N12, N13.6, N15.1 (590)
88#	Hyperplasia of prostate.....	N40 (600)
89#	Inflammatory diseases of female pelvic organs.....	N70-N76 (614-616)
#	Pregnancy, childbirth and the puerperium.....	O00-O99 (630-676)
90	Pregnancy with abortive outcome.....	O00-O07 (630-639)
91	Other complications of pregnancy, childbirth and the puerperium.....	O10-O99 (640-676)
92#	Certain conditions originating in the perinatal period.....	P00-P96 (760-771.2, 771.4-779)
93#	Congenital malformations, deformations and chromosomal abnormalities.....	Q00-Q99 (740-759)
94	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified..	R00-R99 (780-799)
95	All other diseases (Residual).....	D65-E07, E15-E34, E65-F99, G04-G12, G23-G25, G31-H93, K00-K22, K29-K31, K50-K66, K71-K72, K75-K76, K83-M99, N13.0-N13.5, N13.7-N13.9, N14, N15.0, N15.8-N15.9, N20-N23, N28-N39, N41-N64, N80-N98 (135, 240-246, 251-259, 270-279, 286-319, 323-330, 331.1-331.9, 333-389, 435, 520-530, 535-537, 555-570, 572-573, 576-579, 591-599, 601-611, 617-629, 680-739)
#	Accidents.....	V01-X59, Y85-Y86 (E800-E869, E880-E929)
	Transport accidents.....	V01-V99, Y85 (E800-E848, E929.0-E929.1)
96	Motor vehicle accidents.....	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V82.1, V83-V86, V87.0-V87.8, V88.0-V88.8, V89.0, V89.2 (E810-E825)
97	Other land transport accidents.....	V01, V05-V06, V09.1, V09.3-V09.9, V10-V11, V15-V18, V19.3, V19.8-V19.9, V80.0-V80.2, V80.6-V80.9, V81.2-V81.9, V82.2-V82.9, V87.9, V88.9, V89.1, V89.3, V89.9 (E800-E807, E826-E829)

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death	ICD-10 (ICD-9)
98	Water, air and space, and other and unspecified transport accidents and their sequelae.....V90-V99, Y85(E830-E848, E929.0-E929.1)	
	Nontransport accidents.....W00-X59, Y86(E850-E869, E880-E928, E929.2-E929.9)	
99	Falls.....W00-W19(E880-E888)	
100	Accidental discharge of firearms.....W32-W34(E922)	
101	Accidental drowning and submersion.....W65-W74(E910)	
102	Accidental exposure to smoke, fire and flames.....X00-X09(E890-E899)	
103	Accidental poisoning and exposure to noxious substances.....X40-X49(E850-E869, E924.1)	
104	Other and unspecified nontransport accidents and their sequelae.....W20-W31, W35-W64, W75-W99, X10-X39, X50-X59, Y86(E900-E909, E911-E921, E923-E924.0, E924.8-E928, E929.2-E929.9)	
#	Intentional self-harm (suicide).....X60-X84, Y87.0(E950-E959)	
105	Intentional self-harm (suicide) by discharge of firearms.....X72-X74(E955.0-E955.4)	
106	Intentional self-harm (suicide) by other and unspecified means and their sequelae.....X60-X71, X75-X84, Y87.0(E950-E954, E955.5-E959)	
#	Assault (homicide).....X85-Y09, Y87.1(E960-E969)	
107	Assault (homicide) by discharge of firearms.....X93-X95(E965.0-E965.4)	
108	Assault (homicide) by other and unspecified means and their sequelae.....X85-X92, X96-Y09, Y87.1(E960-E964, E965.5-E969)	
109#	Legal intervention.....Y35, Y89.0(E970-E978)	
	Events of undetermined intent.....Y10-Y34, Y87.2, Y89.9(E980-E989)	
110	Discharge of firearms, undetermined intent.....Y22-Y24(E985.0-E985.4)	
111	Other and unspecified events of undetermined intent and their sequelae.....Y10-Y21, Y25-Y34, Y87.2, Y89.9(E980-E984, E985.5-E989)	
112#	Operations of war and their sequelae.....Y36, Y89.1(E990-E999)	
113#	Complications of medical and surgical care.....Y40-Y84, Y88(E870-E879, E930-E949)	

**Appendix 2. Values of Lower (L) and Upper (U) Limits for Calculating 95 % Confidence Limits
For Numbers of Events and Rates When the Number of Events Is Less Than 100**
